WORK EXPERIENCE

Hint Health **2023 – Present**

Engineering Manager (2026–present)

- Led a team of six engineers, overseeing delivery across payments, billing, employer data ingestion, and third-party integrations.
- Negotiated roadmap commitments with Product, Design, Customer Success, and Engineering leadership, balancing feature development velocity with reliability and maintenance.
- Served as hiring manager for three open positions, designing interview processes, conducting candidate interviews, and making final hiring decisions.
- Championed AI adoption through frequent experimentation, internal talks, and sharing practical learnings across the engineering organization. Achieved 100% favorable team responses on confidence in management's AI guidance - the highest result of any team in the company.
- Established agentic engineering workflows that increased engineering throughput while preserving human accountability and rigorous review of mission-critical payment systems.

Senior Software Engineer (2025–2026)

- Led end-to-end delivery of a patient-facing e-commerce storefront, authoring the technical design, breaking work into milestones, coordinating execution across multiple engineers, and reporting progress to product stakeholders to deliver on schedule.
- Fixed a long-standing lock contention issue by replacing a custom Postgres lock mechanism with atomic Redis counters, eliminating costly manual fixes for batch invoice processing failures under workloads involving thousands of invoices.
- Designed automatic recovery to rebuild Redis counter state from the database after data loss or an outage, preserving invoice correctness without relying on persistent Redis storage.

Tech Lead Manager (2023–2025)

- Led a redesign of the payments data model to clarify sources of truth and correctly handle payment processor lifecycle edge cases, improving billing reliability, reducing customer support escalations, and saving an estimated hundreds of engineering hours annually.
- Managed staffing, performance, and career development while maintaining team morale and delivery through significant organizational change.

Humu Senior Software Engineer **2022 – 2023**

- Proposed, championed, and built a shared frontend component library that accelerated UI development and improved consistency across product teams.
- Served as a subject-matter expert for accessibility, helping the company target the WCAG AA standard.

Invitae Software Engineer **2021 – 2022**

- Led development and delivery of a critical single-page application, orchestrating deployment across microservice and FaaS architecture

Esri Software Engineer **2019 – 2020**

- Served as a React and TypeScript subject-matter expert, proactively sharing knowledge by leading lunch-and-learn sessions and helping improve engineering practices.
- Led the rewrite of a mission-critical search component, modernizing its implementation and improving maintainability.

Earlier Experience

Frontend Software Engineer	| Periscopic	2017 – 2019
Software Engineer	| FocusVision	2016 – 2017
Junior Software Engineer	| Notch8	2015 – 2016

TECHNICAL SKILLS

Engineering Leadership: Engineering Management, Technical Leadership, System Design, Software Architecture, Technical Roadmaps, Project Management, People Management, Performance Management, Mentorship, Cross-Functional Collaboration

Technologies: JavaScript, TypeScript, React, Elm, Ruby, Ruby on Rails, HTML, CSS, PostgreSQL, SQL, Redis, Git, CI/CD, AI-assisted software development, agentic coding workflows, AI-enabled engineering practices

EDUCATION

B.A. History - University of California, Santa Cruz **2009 – 2013**
